DETAILED ACTION

1. After carefully reconsideration of this application, the previous office action is withdrawn. Claims 1-22 are pending. Claims 1-11, directed to non-elected group invention are withdrawn from consideration. Claims 12-22 are considered in this office action.
2. Applicant's arguments and amendment filed 10/2/03 have been considered and persuasive but are moot in view of the new ground(s) of rejection as follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 12-22 are rejected under 35 U.S.C. 102(e) as being anticipated by Lambrecht et al. (6,482,235). Lambrecht et al. disclose a method of preventing the escape of natural, artificial or therapeutic material through a defect in the annulus fibrosis of a spinal disc comprising the step of inserting a device (12 or 51 with expanders and anchors, Figs. 11-55 and col. 16-30) in the annulus fibrosis and occluding the defect by allowing the device to expand to a larger size (col. 16, lines 8-

14; col. 17, lines 19-65), return to a memorized shape (col. 16, lines 8-14) and/or by adding additional anchoring devices (col. 15, lines 60-65).

In regarding to claim 13, wherein the step of inserting the device includes compacting the device into a compressed form for introduction relative to the defect (col. 16, lines 8-14 and col. 17, lines 19-65).

In regarding to claim 14, the device includes a flexible screen or patch (col. 21, lines 57-65)

In regarding to claim 15, wherein the device inserted into the defect includes anchors (col. 15, lines 50-67)

In regarding to claims 16 and 17, wherein the device includes a liquid, gel/hydrogel or elastomer (fluid for expander or gel or elastomer material col. 21, lines 63-67).

In regarding to claim 18, the device occludes the defect while allowing compression and distraction of the disc with respect to normal spinal movement (inherent).

In regarding to claims 19 and 20, the flexible screen is a metal, titanium screen (col. 21, lines 63-67).

In regarding to claims 21 and 22, the anchor includes a wire or spike (suture or staples, col. 15, lines 60-67).
